

Music store

Music composers are often looking for a platform to display their beautifully composed music albums but sometimes suffer due to the absence of appropriate marketing platform to display their music albums. The solution to this problem is www.urmusicstore.com. The music composers can upload their songs to the website and it will provide a marketing platform for these songs uploaded.

Requirement

Display a category of Genre. The genre can be retrieved from local repository. The following categories to be retrieved from JSON file.

1. Rock
2. Jazz
3. Metal
4. Classical

Design considerations

Display Genre in a grid. Each grid should consist of category Genre and at the bottom of the Genre display category name.

Business Rules and Process

On click of Genre pass the category id to the server and get the JSON response printed on the page.

UI Design: Build the following screens.
